

Equalization chains: correct order, retimed module, LPO

(A) Correct SerDes EQ order (one electrical lane)

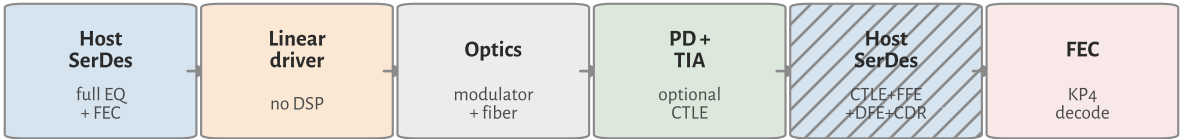

FFE is Tx and Rx. Linear stages first; DFE last. Mild channels may drop DFE.

(B) Fully retimed pluggable (module owns heavy EQ)

Module DSP includes FFE/DFE/CDR both sides of the optics.

(C) LPO (simplest module; host carries the EQ)

No module DSP/CDR. Optional TIA CTLE only. Host SerDes must close (A).
